

Model Comparison

VLM vs external model on the binary task

Discrete metrics at the 0.5 threshold

Metric	VLM	External	Delta
accuracy	0.9405	0.9285	0.0120
macro_f1	0.9404	0.9281	0.0123
weighted_f1	0.9404	0.9281	0.0123

Per-sample summary

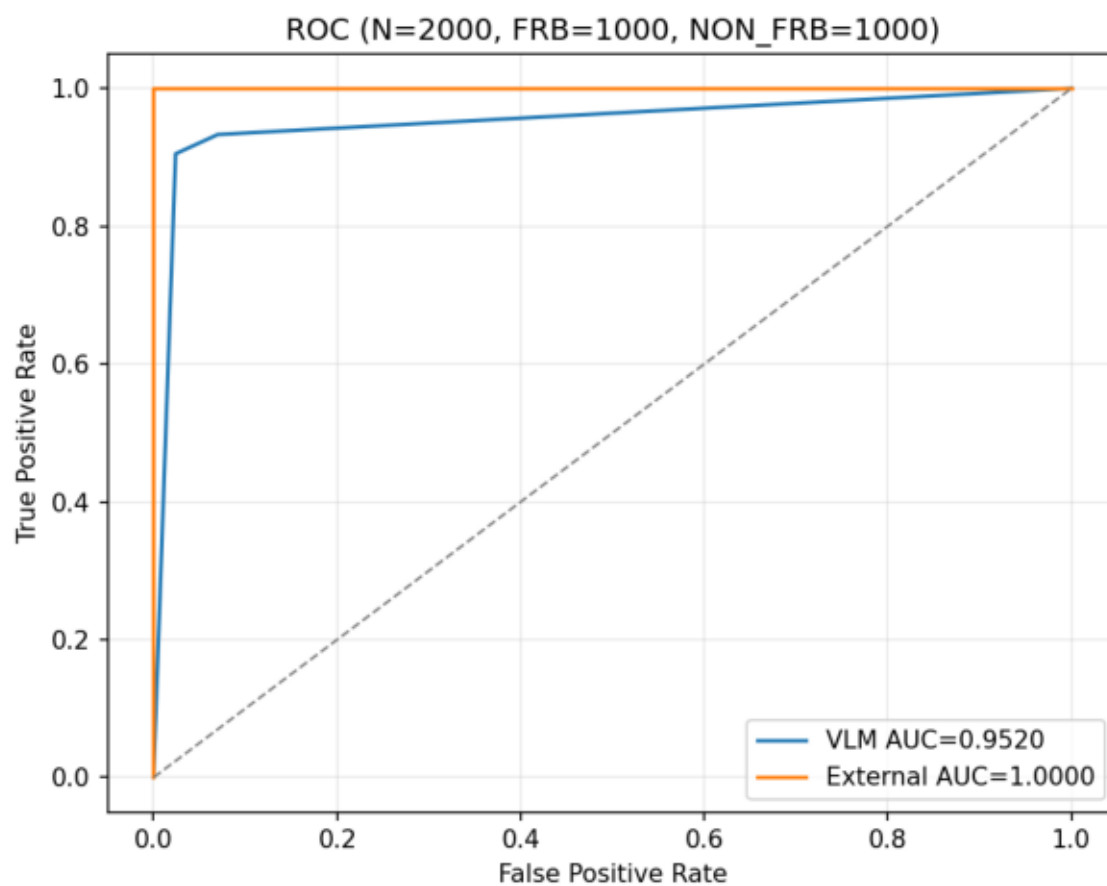

Indicator	Value
Common samples	2000
Agreements	1782
Disagreements	218
Only the VLM correct	121
Only the external model correct	97
Both correct	1760
Both wrong	22
Samples only in the VLM file	0
Samples only in the external file	0

Binary probabilistic analysis

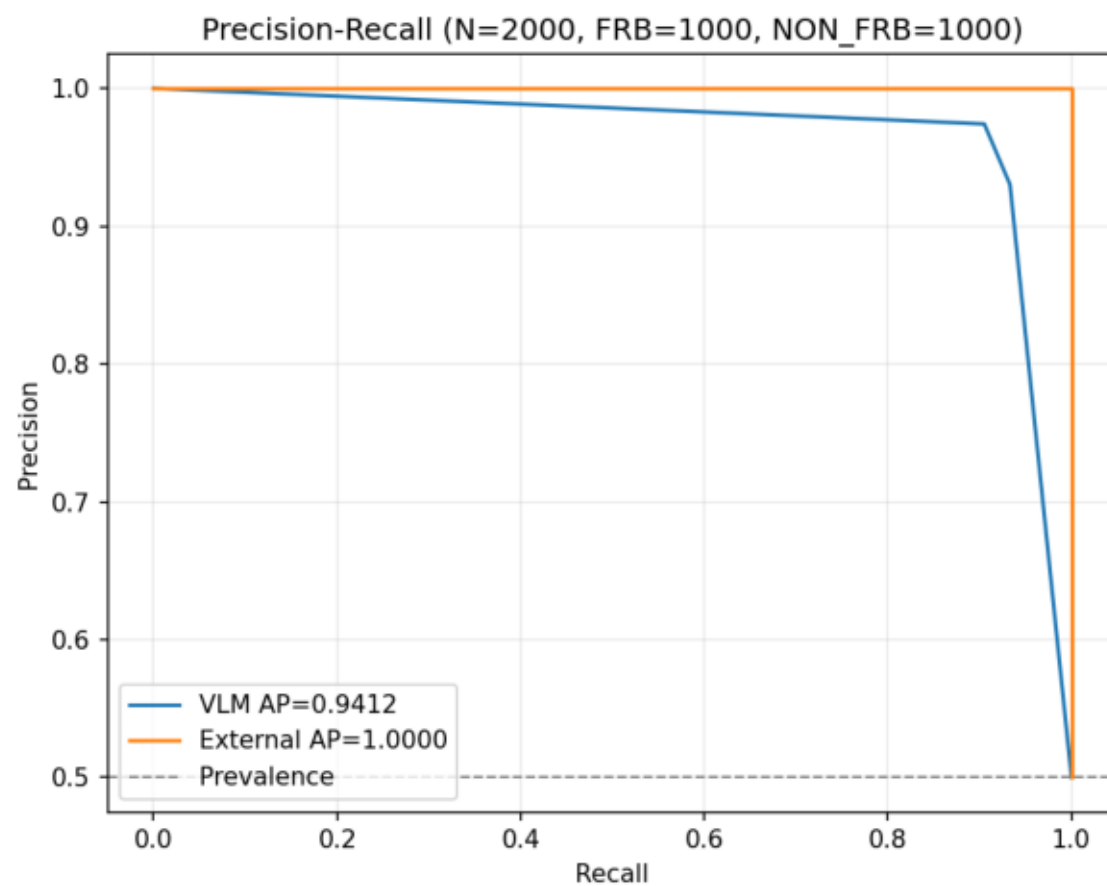

Indicator	Value
Paired samples	2000
FRB	1000
NON_FRB	1000
AP VLM	0.9412 [0.9281, 0.9542]
AP external	1.0000 [1.0000, 1.0000]
Delta AP	-0.0588 [-0.0719, -0.0458]
AUC VLM	0.9520 [0.9426, 0.9620]
AUC external	1.0000 [1.0000, 1.0000]

The ROC/PR curves use `parsed_response.frb_probability`. The root-level confidence is only the confidence in the discrete label. Log-loss, Brier, and ECE use clipping to [1e-7, 1-1e-7].
